

Security Cameras have come of Age...

21 reasons why **StoreWatch™** by Linux is the right decision from a mature retail manager

1 A security camera system must be reliable. **StoreWatch™** is Rock solid and designed to multi-task and not crash. Multi-tasking is what modern security camera systems must do - record, playback, network, multiplex, remote view, switch, record on motion -often simultaneously. Windows regularly fails in this area-that's why it crashes, freezes and performs other 'illegal operations' we all experience even on our conventional PCs.

StoreWatch™ uses Linux because it is acknowledged for its outstanding reliability in medical technology, space travel. and wherever reliability is crucial.

Linux is the most compelling reason to use **StoreWatch™** on retail premises.

2 EASY operation – save training costs

3 RapidSearch – Find the truth, faster. 28 seconds to find an incident

4 Velvet Replay. Smooth replay much advanced on typical Windows product

5 Maintains staff confidence –operates even with HDD failure
